Year 6 Autumn 1 Online Safety

How can you protect yourself, your information and reputation online?

Digital footprint

Everything you do online leaves a digital footprint of your activity.

This forms your digital reputation and can affect what others think of you.

Think carefully before you post, comment or share online.

Sharing online

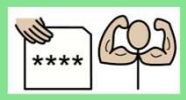

Sharing online can have a positive or negative impact

You always need to ask permission before sharing photos or information about someone else

Even 'private' posts can be copied or shared

Passwords and security

Use a strong password

Never share your password

Change your password quickly if it is shared

Use 2 factor authentication if you can

Scams and privacy

Scams trick you into sharing personal information. Keep personal information private and if in doubt, don't share.

Online bullying and getting help

- Never respond to bullying comments
- Save evidence by taking a screenshot or recording messages
- Report, block and talk to a trusted adult
